## PREFACE

My goal in writing this book is to address the need for an up-to-date reference on a central activity of music librarianship: collection development and management. The landscape of music publishing and digital resources has evolved greatly in the last decade, creating new challenges and opportunities for music libraries. This book provides both theoretical context and practical approaches to the issues facing music collection builders and managers today. It engages with many of the core responsibilities relevant to music collections in both music library and general library settings. It looks at the whole of music collections, incorporating guidance on the principles of and tasks involved with collection building, acquisitions, management, and assessment. However, for all that it aims to become an indispensable tool for music librarians and others who work with music collections, this text cannot be comprehensive. This volume focuses on issues related to music scores and media in physical and electronic form, while books, journals, and archival materials are mentioned only in passing.

My long experience building, maintaining, and using collections in music libraries (both as a student, musician, and librarian) in large and small academic settings has informed this book, as have many conversations with library colleagues. It is worth noting that there are no profession-wide standards or protocols for building and maintaining collections (whether in general terms or in music libraries). Many of the tasks involved in working with collections are learned on the job, varying with each institution's policies and setting and relying on the practitioner's experience and judgment. Given the wide variation in practice at each institution, this text provides practical information and recommendations that can be applied in many, if not all, different music collection contexts. These range from academic and conservatory libraries to public libraries, regardless of the size of the collection or institution. Practicing librarians and staff who acquire and manage music collections, both music and non-music specialists, will benefit from the content in this book. Anyone from experienced music librarians and novice non-specialist acquisitions staff should be able to glean something of use. This book is also suitable as a text for students studying music librarianship and collection development in general.

## ACKNOWLEDGMENTS

Whatever good is in this book comes in small part from me and in large part from others. I have learned from many knowledgeable and generous colleagues while in my current and past positions. This includes the late Geri Laudati at the University of Wisconsin and John Druesedow at Duke University. It also includes John Wagstaff, my predecessor at the University of Illinois, my current colleague Scott Schwartz in the Sousa Archives and Center for American Music, as well as Professor Emeritus Don Krummel.

The sabbatical granted to me by the University of Illinois Library, lasting from February to August 2020, allowed me to get my initial thoughts for this book on paper. I am indebted to

# INTRODUCTION

This book is intended to serve as an educational and reference tool for new and experienced librarians and other staff who work with music collections in the areas of acquisitions, collection development, and collection management. It describes the current landscape of music publishing and digital resources and how library work has changed to address this and to meet ever-evolving patron needs. It examines activities throughout the entire life cycle of selecting, maintaining, and deselecting titles for the collection, with a focus on physical and electronic music scores and music audiovisual media. Although this book primarily addresses those subject librarians who select music materials in academic libraries, it also contains information helpful for music librarians in other settings such as public and conservatory libraries. It is also relevant for other personnel who work with music collections, whether in music libraries specifically, general library collections, or centralized library acquisitions departments.

## PAST LITERATURE AND PRACTICE

Generic collection development texts are useful in understanding the larger context of library organizations and their workflows but do not meet the needs of those who specialize in music collections.<sup>1</sup> The two seminal works on building music collections are R. Michael Fling's *Library Acquisition of Music* (2004) and *Guide to Developing a Library Music Collection* (2008).<sup>2</sup> Few music librarians who work in selecting and acquiring music materials have not benefited from the wisdom and sources laid out in Fling's books. Much of what he writes is still helpful and valid. In many ways, however, he describes a time in which library collections were built and used differently. His books also speak from the perspective of someone whose position focused on music collection development and had responsibility for a whole range of tasks in the acquisitions workflow. Most music selectors today work in the context of broader positions (where they have more general responsibilities) and more decentralized libraries (where many of the acquisitions-specific tasks may be handled by central acquisitions staff).<sup>3</sup>

## NOTATED MUSIC FORMATS AND PUBLISHING

### INTRODUCTION

To successfully build a library collection, one must understand the formats in which content is created and how they are produced, delivered, and used. This is especially true in music collections where notated music formats and editions have specific functions and uses. Traditional publishing and distribution models for notated music involve a multi-layer relationship between creators, producers or publishers, distributors, and vendors. With the evolution of technology it is increasingly possible for composers and performers to self-publish and self-distribute their work directly to consumers. The digital environment has led to numerous outlets for online content distribution for scores, both free sites like the International Music Score Library Project (IMSLP) and commercial sites like Sheetmusic.com. This chapter outlines the various formats of notated music and how they are used by scholars, creators, and performers. It also provides an overview of the publishing and distribution process. It will not discuss the history of music notation, printing, or publishing.<sup>1</sup>

### NOTATED MUSIC FORMATS AND EDITIONS AND THEIR USES

Notated music is used by scholars and performers at all levels including students, amateurs, and professionals, and can be handwritten (i.e., manuscript), computer-generated, or typeset. Manuscripts entirely in the handwriting of the composer are called holographs, whereas those that only contain the composer's signature (or autograph) are called autograph manuscripts. Whether musical works are finished or unfinished, the composer may have written musical sketches while composing the piece to capture ideas relating to the melody, orchestration, or other details. Especially when talking about physical manuscripts, there may only be fragments of a work's manuscript still in existence. Therefore, descriptions in sales catalogs or library catalogs might include terms like "autograph working manuscript" or "autograph manuscript sketch and libretto fragment with autograph annotations." Composers today often use special notation software to create their music. Therefore, works may now be born-digital and not be captured in handwritten manuscripts, although some composers use a hybrid approach. Throughout this

## DIVERSITY AND INCLUSION IN MUSIC COLLECTIONS

### INTRODUCTION

Contrary to popular belief, music is not a universal language. Although it is found in most but not all cultures, it is not always conceptualized in the same way that Western cultures understand it. Neither is it universally understood, as musical meaning varies across people, place, and time. Moreover, “universal” has become a euphemism for “superior” or dominant in the context of the study of music.<sup>1</sup> The fields of classical music composition and performance have long experienced gender and racial inequities, while librarianship has suffered from racial inequities. Rising racial tensions gained the United States’ full attention in 2014 with the Ferguson unrest and continue today. In the wake of this many fields are discussing diversity, equity, inclusion, and access or accessibility (DEIA) with renewed purpose. In the context of this volume, these can be defined briefly as follows:

- diversity—increased representation of people of color in libraries, in performing groups, in the repertoire and collections,
- equity—equality of opportunity and fairness in access to information and resources,
- inclusion—creating an environment of belonging that allows all to contribute and thrive, not to just be present,<sup>2</sup>
- access(ibility)—creating access for all regardless of ability or social status.

Diversity, equity, inclusion, and accessibility must be considered together, although this chapter focuses predominantly on representation of diversity in collections. Some argue that to have lasting, meaningful impact we must go beyond simply striving for DEIA in the profession and libraries and adopt a social justice mindset to address the inequities that exist.<sup>3</sup> This chapter presents the background of DEIA issues in librarianship, music, and music curricula and how this affects music collection development and management. It also offers approaches and tools

## COLLECTION ASSESSMENT

### INTRODUCTION

A critical aspect of collection management is assessment, which aims to keep the collection relevant and healthy. Assessment involves components both of analysis (which tends toward the objective) and evaluation (which tends toward the subjective). Analysis typically uses quantitative measures, such as circulation statistics or expenditures in a specific area. However, qualitative assessment often still uses data as its basis, with evaluative elements such as how well the collection supports the curriculum and student needs. I will primarily use the term assessment, with the understanding that some efforts will be more qualitative than quantitative and that they are on a spectrum between analysis and evaluation. Like all library work, assessment is not, and cannot be neutral, as it involves human observation, values, and judgement. As with collection management, collection assessment duties may be conducted by a variety of individuals depending on the setting. I will use the term “collection manager” when referring to the individual with chief responsibility for planning and conducting assessment projects, and this may often be the same individual who is responsible for collection development.

Library materials have lifespans, some longer than others, based on their content and condition. Assessment of music collections based on their content is complicated primarily because of the nature of the materials themselves. There are no clear rules dictating how many editions, versions, or copies of a work to keep. Music itself does not necessarily (or ever) go out of date, although editorial and pedagogical approaches can change, as do artistic tastes. Music materials are used differently than books, both in an intellectual sense and a physical one. This chapter examines the various approaches to assessing physical and electronic music collections and then discusses the various possible outcomes of assessment efforts such as transfer or disposal.

### THE WHAT AND WHY OF COLLECTION ASSESSMENT

Assessment keeps a collection strong by revealing what should be kept, removed, relocated, or repaired to make it as functional as possible for patrons. In addition, it identifies which areas of the collection can be strengthened through additional acquisitions. Specific areas of the collection can be assessed for completeness, depth, inclusiveness, and quality. As such, libraries should have a regular plan and schedule for assessment. Such efforts can help determine if items in the collection need relocation to another sublocation or different collection altogether to improve their findability, accessibility, or security. Assessment can also illuminate whether holdings and expenditures align with curricula supported by the library. Assessment can determine
